

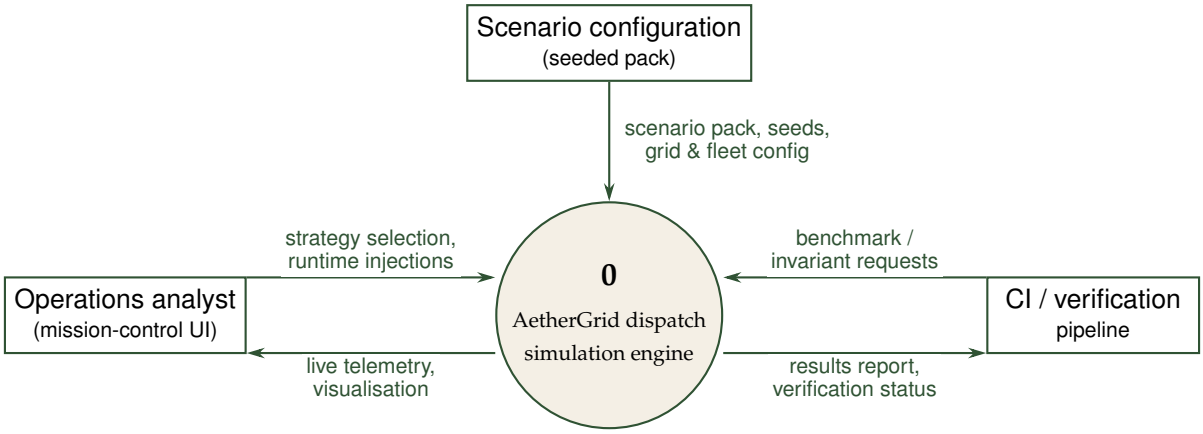

Figure 1: Level 0 (Context Diagram). Global system boundary with bidirectional operational and verification corridors.

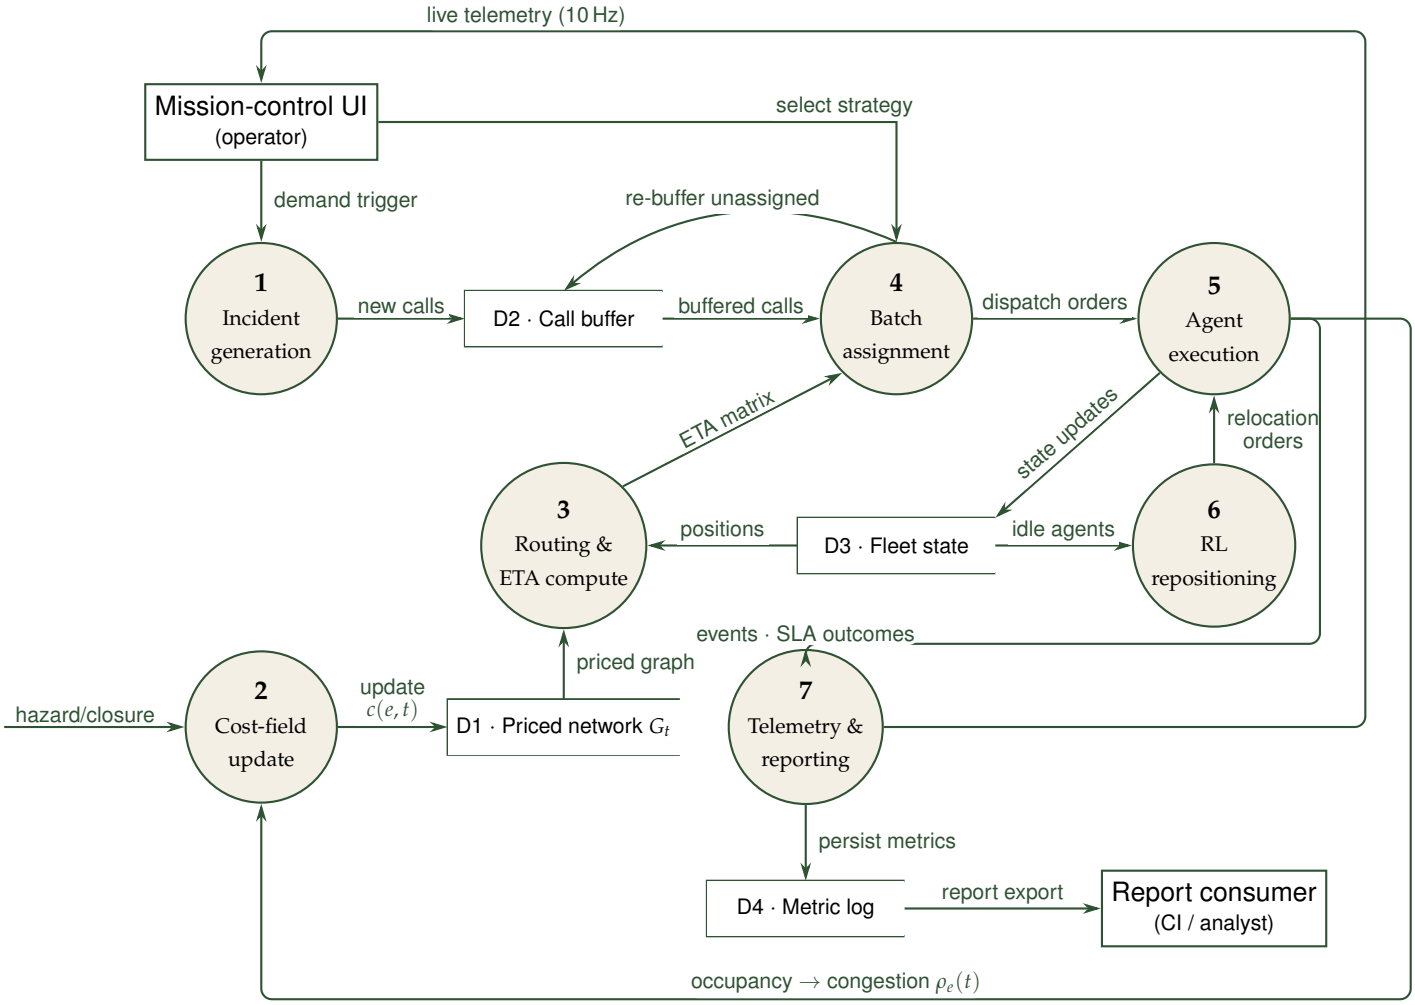

Figure 2: Level 1. Complete operational flow decomposition with isolated feedback paths and non-intersecting event corridors.

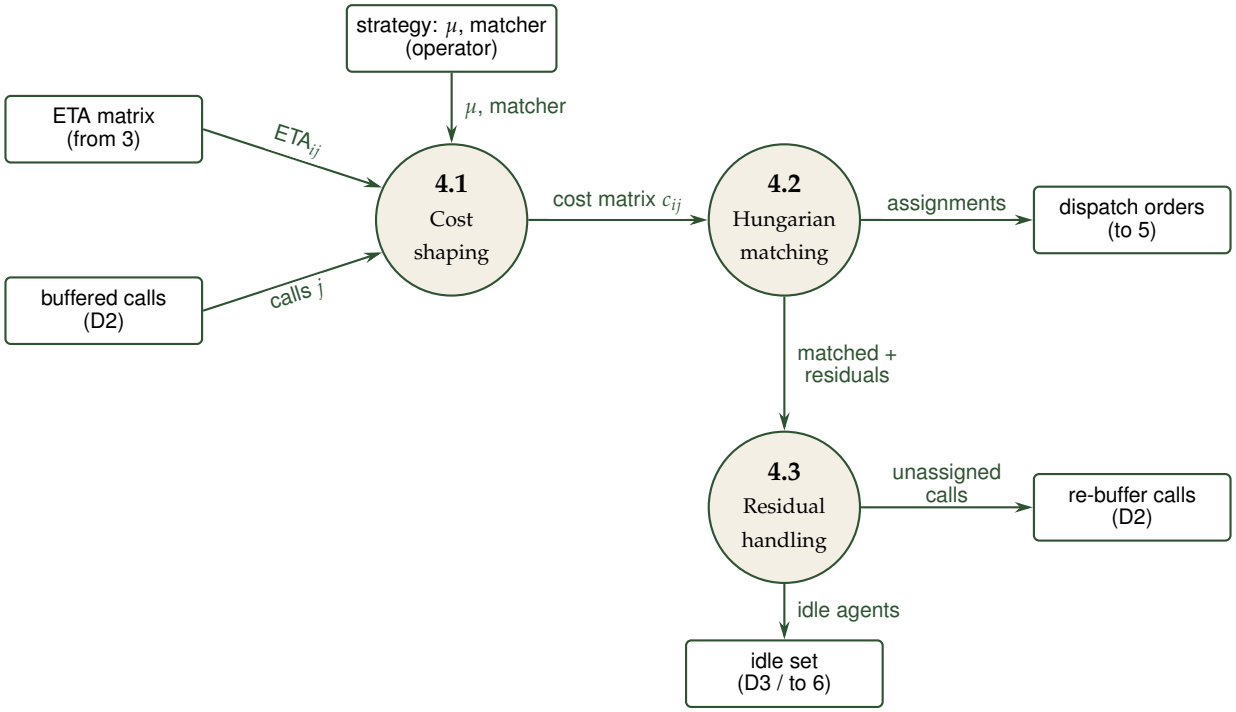

Figure 3: Level 2 — Process 4 (Batch Assignment). Deconstruction of cost shaping, matching, and residual set partitioning.

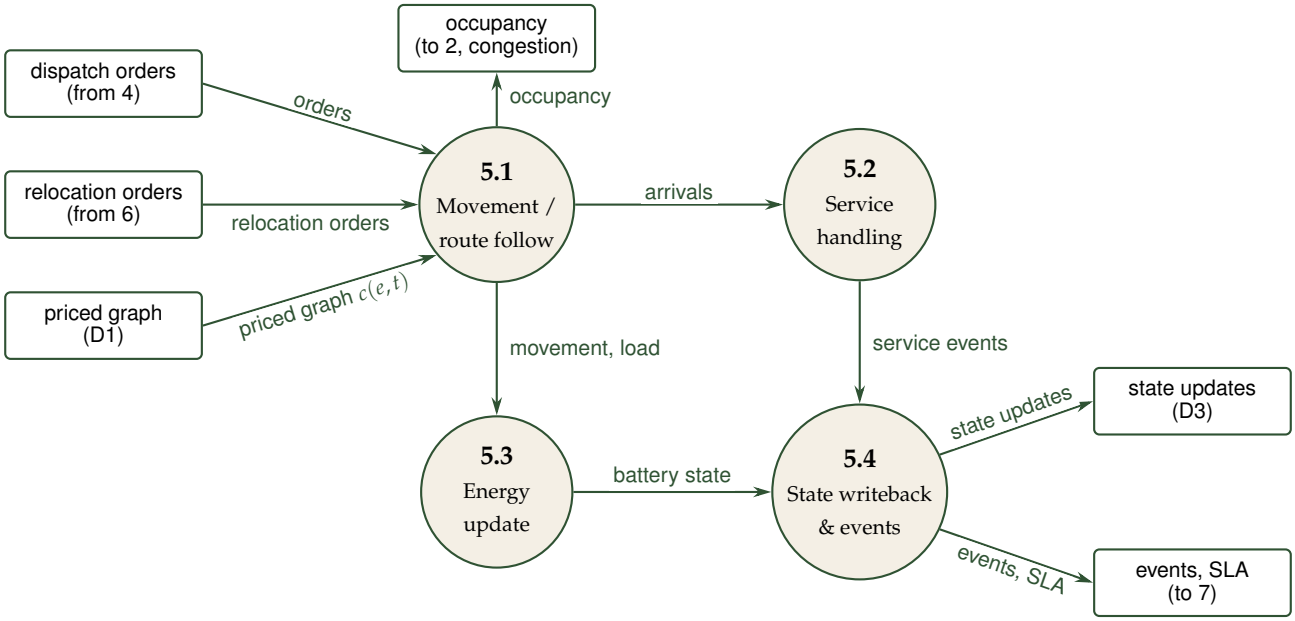

Figure 4: Level 2 — Process 5 (Agent Execution). Internal agent simulation pipeline with dedicated entry/exit corridors and decoupled congestion telemetry.
